

FCIResearch Document

What is this document?

This document describes the system in terms of functional requirements and Scope of the system.

Software Purpose

This software helps people to manage their search and know more about information they are interested in, have a connection with other people and share posts .

easy access to site connect with fci researcher and students , share knowledge ,research automatically , share knowledge and get answers for their Questions.

Software Scope

The function of this service is to provide search system with social features that allow users to interact with each other

Requirements :

- **Check accounts**

when member enter his email the system search about this email if find it will enter else if appear error message .

- **Search**

Allow user to find information he/she wants, and add it manually if it's not in the public .

- **post and answer question each other.**

the researcher have limit time , if exceed the limit time,he cannot post any thing.

- **share outcomes**

publications, technical documents, presentations, code, etc.) with a title, description, and if there is URL for direct download.

- **ask the author researcher**

for access to any of his resources/outcomes, by sending him notification describing the purpose of access to this resource.

- **create research groups**

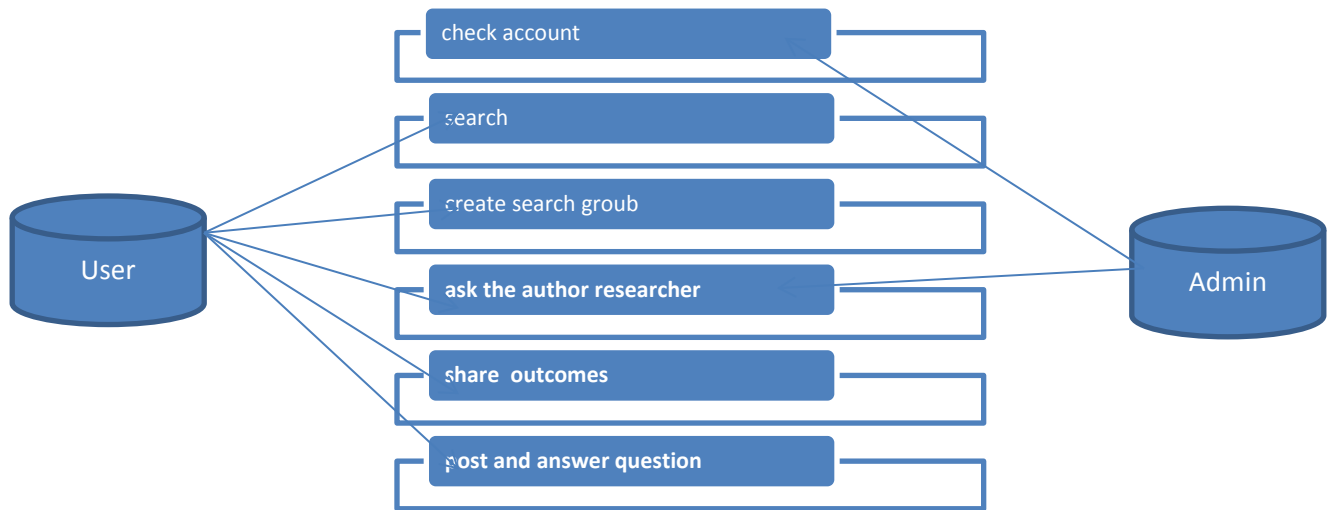

add members to it. Member in a group can edit its name, description, members, and meeting times. Only group creator can delete it.

"FCIResarch" should have a separate page/link for current existing research groups with its descriptions, and contacts for its members.

Use case table :

Use Case ID:	002	
Use Case Name:	Fci research	
Actosr:	Users- Admin	
Pre-conditions:	User should enter his email to enter to fci search	
Post-conditions:	The system check about email and let user do all services	
Flow of events:	User Action	System Action
	1- User email and Password.	
		2- System Verify user data
	3- User search	
		4- System help user to find it
	5-User post,answerquestion ,create search groub	System help him for that
Exceptions:	Error emails- search about thing not in system -	
Includes:	Search , all system services	
Notes and Issues:	using system very well and follow instractions	

Use case model :
